ActivateMe® Partner Form – API details

What the form sends, what to check, and what to reply. Prepared by Aseel (Marketing).

1. How it works

1. Someone fills in the partner form on activatemefest.com.
2. Their browser sends one `POST` request with the answers as JSON (`Content-Type: application/json`) to your endpoint. No login needed, it's a public form.
3. Your API checks it, saves it under ActivateMe® Fest, and replies `ok` or `not ok + message`. The form then shows a thank-you or the error message.

The endpoint address is up to you, e.g. `https://events.mwancloud.com/api/partner-applications`.

2. Allowed domains

Accept only requests whose `Origin` header is one of:

- `https://www.activatemefest.com`
- `https://activatemefest.com`
- `https://activateme.dev.mwancloud.com` (staging)

Anything else: reply `403` and don't save. Because the request comes from the browser, the API also needs to answer the browser's `OPTIONS` check (CORS) for these domains with `Access-Control-Allow-Origin: <origin>`, `Access-Control-Allow-Methods: POST, OPTIONS` and `Access-Control-Allow-Headers: Content-Type`, and add `Access-Control-Allow-Origin` to every `POST` reply too, errors included.

Note: the domain check stops other websites, but scripts can fake it, so please also add a rate limit (about 10 requests per minute per IP) and keep the spam trap below.

3. Inputs

Field	Required	Rules	Example
`event`	Yes	Event alias. Only `activate-me-festival` for now	activate-me-festival
`org`	Yes	Organisation name, up to 150 characters	Little Kickers Dubai
`type`	Yes	One of the type options below	Academy / club
`activity`	No	What they do, up to 150	Kids football, ages 4–14
`interests`	No	List, any of the interest options below	[Title Sponsor, Interactive Booths]
`name`	Yes	Contact name, up to 120	Sara Ahmed
`role`	No	Up to 120	Founder
`email`	Yes	Valid email, up to 200	sara@example.com
`phone`	Yes	Phone / WhatsApp, at least 7 digits, up to 40	+971 50 123 4567
`website`	No	Website or Instagram, up to 300	@littlekickersdxb
`message`	No	Free text, up to 2000	We'd love a booth.
`consent`	Yes	Must be true (agreed to be contacted)	true
`page`	No	Page the form was sent from	/partner-with-us
`company_url`	No	Hidden spam trap. Real people leave it empty	(empty)

Type options: Academy / club · Brand / sponsor · Performer / speaker · School / community group · Other

Interest options: Title Sponsor · Event Sponsorships · Interactive Booths · Community Programs

4. Example request

```
POST /api/partner-applications
Origin: https://www.activatemefest.com
Content-Type: application/json

{
  "event": "activate-me-festival",
  "org": "Little Kickers Dubai",
  "type": "Academy / club",
  "activity": "Kids football academy, ages 4-14",
  "interests": ["Title Sponsor", "Interactive Booths"],
  "name": "Sara Ahmed",
  "role": "Founder",
  "email": "sara@example.com",
  "phone": "+971 50 123 4567",
  "website": "@littlekickersdxb",
  "message": "We'd love a booth on both days.",
  "consent": true,
  "page": "/partner-with-us",
  "company_url": ""
}
```

5. Checks the API should do

The form already checks these, but the API should check again since browser checks can be skipped:

1. Domain is allowed, otherwise `403`.
2. If `company_url` is filled in, it's a bot: reply `ok` but don't save.
3. `org`, `name`, `email` (valid), `phone` (7+ digits) and `consent = true` are present, otherwise `400`.
4. Unknown `type` → save as Other. Unknown `interests` → ignore.
5. Trim text and cut to the max lengths. Store as plain text.

6. Responses

The form shows the `error` text to the person, so keep it short and friendly.

Case	Status	Reply
Saved (or spam trap)	200	{"ok": true}
Missing / invalid fields	400	{"ok": false, "error": "Please fill in your organisation, name, a valid email and phone number."}
Consent not ticked	400	{"ok": false, "error": "Please tick the consent box."}
Domain not allowed	403	{"ok": false, "error": "Origin not allowed"}
Too many attempts	429	{"ok": false, "error": "Too many attempts. Please wait a minute."}
Server problem	500	{"ok": false, "error": "Applications aren't available right now."}

7. What to save and show

- **Save:** all inputs (except `company_url`), plus date received, the website it came from, consent date, **status** (New by default) and **notes**. No need to keep IP addresses.
- **Admin section** in ActivateMe® Fest: list of applications (newest first), change status (New / Contacted / Interested / Joined / Declined), add notes, filter by status, export to Excel, delete (spam or data-removal requests). Team logins only.
- **Nice to have:** when an application is marked Joined, one click to add it to the General Database of partners.

8. Next step

Once the endpoint is ready, send me its address and I'll point the form to it. Nothing else changes on the website.
